ABSTRACT

An image processing system including an image
processing unit for processing input image data and an
output unit for outputting an image processed in the image
5   processing unit. The image processing unit has the
function of cutting out a background portion of the image
and effecting color specification and further has the
function of specifying a method of processing the
background portion. When printing the image, the output
10   unit recognizes the background portion on the basis of the
color specification and carries out background processing
for the recognized background portion on the basis of the
specified background processing method. It is possible to
prevent visible unevenness of printing from occurring in
15   the background portion.
